

# Hiatus — Metrics

## 1 Metric definitions

### 1.1 Warming

Raw monthly LSWT  $\rightarrow$  annual mean  $\rightarrow$  Theil–Sen slope  $\times$  40 years.

### 1.2 Acceleration

Sen slope of first-differenced annual STL trend.

### 1.3 STARS

$L=7$ ,  $p=0.05$ . Minimum regime length 7 years, shift significance  $p < 0.05$ .

### 1.4 Clustering

$K=8$ , z-scored annual STL trend + normalised mean temperature. Cluster ordering by mean temperature (C1=coldest  $\rightarrow$  C8=hottest).

### 1.5 Teleconnection indices

ENSO (Nino3.4), PDO, AMO, NAO, AO. Annual means from monthly NOAA data.
